

Reframing Practice and Policy for People with Dementia in Ireland

Professor Eamon O'Shea

Centre for Economic and Social Research on Dementia

- Building on 30 years of ageing research
- HRB Leader Award in Dementia
- HRB Applied Partnership Award with HSE
- Research Programme - economics, social care, family care, psychosocial care, personhood, public policy
- Dementia Observatory
- Leadership and capacity-building
- Stakeholder engagement

Introduction

- Dementia is chronic progressive condition largely affecting older people
- Cognitive impairment, memory loss, confusion, disorientation, language difficulties, behaviour
- 47 million people with dementia worldwide; 132 million by 2050; 10 million new cases annually
- 55,000 people with dementia in Ireland
- €2 billion annual cost

Background

- Dementia an ageing problem
- Stigma still associated with diagnosis of dementia
- Economic and social costs of dementia are high
- Public knowledge improving, but attitudes remain largely negative, pessimistic and nihilistic
- Need for clinical, economic and social discourse

Number of People with Dementia

YEAR	Number
2016	55,000
2031	100,000
2041	140,000

Main Costs of Dementia

- Cost of Dementia is €2 billion
- Families bear most of the cost - around 50%
- Residential care costs also high
- Primary care and community care low in comparison
- Cost significant relative to other diseases like cancer and heart disease

Current Realities

- Lack of focus on prevention
- Diagnosis – absence of timely diagnosis
- Community care is patchy
- Co-ordination of care is weak
- Acute care – awareness and training
- Residential care – not person-centred
- Weak support for family carers e.g. PDS
- End-of-life care needs not being met

What Do Older People Want?

- Good information
- Choice
- Individualisation of care
- Integrated care
- Family involvement
- Opportunity to live well at home

National Dementia Strategy

- Principles – personhood and citizenship
- Intensive home care packages for people with dementia – 500 up to 2018
- Public awareness – Dementia Understand Together Campaign - HSE
- Education and training – GP's and Primary Care system

Policy Frames

Current

- Individual
- Biological
- Residential
- Risk
- Deficits
- Exclusion

Counter

- Collective
- Social
- Home
- Capabilities
- Assets
- Inclusion

Conclusion

- Dementia is the most important ageing question
- Spending nearly 3 times more on residential care than home care
- Need individualised home care solutions
- Personhood costs money
- Carers need more support e.g. PDS
- Need to talk about private/public/family responsibilities
- Need new funding model for enhanced home care provision in Ireland
